

Thank you to owners who have responded positively in support of the work this Board of Directors is doing regarding the sewers and the communication sent yesterday. To clarify for those owners who have concerns, please understand that the Board has worked tirelessly over the past year to address the ongoing sewer issue in loops 1 and 5. Work was done last fall as the first step to address that issue.

The current problem is downstream from the work that was completed last fall. On Thursday a plan to solve the current issue was discussed and implemented with a contractor. Work was set to commence immediately. Because workers will be working from the main road going to the entrance to loop 1 it only makes sense to not use the sewers upstream from that area to eliminate the flow of black and grey water that may end up where the work is being completed.

Please know that the Board has not "sat on anything" to inconvenience any owner and has in fact done the complete opposite to try to get this looked after before the season starts. Many hours, a fact often overlooked and unappreciated by some, have been put in by Board members and the Park Manager to get to this point.

We on the Board are owners as well and want things up and working as quickly as possible. That being said, the Board stands by its decision and would ask all owners to respect that decision so that park personnel and contractors can do the required work in a clean environment and as expeditiously as possible.
