

Sewer Work Update

Work started today in Loop one and at least one major line failure has been discovered in the entry to loop one. Digging has begun so we would ask that all owners stay clear of the construction area as there will be large holes and equipment and we want no injuries. The contractor has asked that people stay away from this area at all times so they can get this work done in a safe and timely manner. There will be barricades up at the entrance to loop one and another around lots 38 and 18. We apologize for the inconvenience to approximately 6-8 lots in the area. Please use caution when walking to your lots and work with your neighbours on temporary parking arrangements. Because of the depth of the dig and the fact there is still frost in the ground we are looking at the expected 2 week schedule before this will be completed.

Because of the work being done in the manhole on the main road leading into loop one we are again asking owners to not use the sewer for anything at this time. This unexpected problem has also damaged the main water line so we will update owners once we have an expected start up time.
